                                                                                                                                                                                                                                                                                                                                                   epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                         The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples,
                                                                                                                                                                                                                                                                                    which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis; schizophrenia,
nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          233

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            e present invention relates to human single exon nucleic acid probes ENP: see AAI10068-AAI28459). The present sequence is a peptide encoded one such probe. The SENPs are derived from human HeLa cells. The SENPs and be used to produce a single exon microarray, which can be used for asuring human gene expression in a sample derived from human cervical ithelial cells. By measuring gene expression, the probes are therefore eful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lote: The sequence data for this patent did not form part of the printed pecification, but was obtained in electronic format directly from WIPO It ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   201 AKSPVKEEAKSPAEAKSPVKEEAKSPAEVKSPEKAKSPTKEEAKSPEKAKSPEKEEAKSP 260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               261 EKAKSPVKAEAKSPEKAKSPVKAEAKSPEKAKSPVKEEAKSPEKAKSPVKEEAKSPEKAK 320
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 184 A----DGQTPKDGSSKSGAEDQTPKDVPNKSGAEKQTPKDGSNKSGAEEQ--GPID---- 233

cytostatic, antiarthritic, antialergic, antidiabetic, antilipaemic, antiarthritic, antialergic, antidiabetic, antilipaemic, antiarthritic, antiallergic, antidiabetic, antilipaemic, antiarthritic, dermatological, antianaemic, antipsoriatic, antiantenmatic, antianaemic, antipsoriatic, antiantenmatic, antianaemic, antipsoriatic, cateopathic, dermatological, and antianic, antipsoriatic, equilate protein transport. PAMP proteins and antignous are useful for preventing or treating a disorder associated with decreased or increased expression or activity of PTAM. PTAM polynucleotides are useful for diagnosing conditions associated with PTAM, comprising detecting PTAM by forming a hybridisation complex, preferably after PCR amplifying the biological sample. Diseases prevented, treated or diagnosed include cell proliferative disorders such as cancers, immune disorders, secretory disorders and other conditions associated with abnormal vesicle trafficking, such as allergies, asthma, urticaria and autoimmune trafficking, such as allergies, asthma, urticaria and autoimmune a targeting or delivery mechanism for bringing pharmaceutical agents into cells or tissues expressing PTAM and for diagnosis of PTAMF. Telated disorders. PTAMF, its catalytic or immunogenic fragments are useful for drug screening using libraries of compounds. PTAM polynucleotides are useful for generating phybridisation probes useful in mapping the naturally occurring genomic sequences.
                                                                                                          New human protein transport-associated polypeptide and polynucleotide useful for diagnosis, prevention and treatment of cell proliferative and secretory disorders such as leukemia, cystic fibrosis
                                                                                                                                                                                                                                                                                         AAA08035 to AAA08042 encode the human protein transport-associated molecules (PTAMs) given in AAY82317 to AAY82324. The PTAMs have
                                                                                                                                                                                                                                     Claim 1; Page 61-62; 75pp; English.

```
The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebral adsorders e.g. cardiac arrest, cerebral disorders e.g. cardiac arrest, cerebral disorders e.g. cardiac arrest, cerebral disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and funging occular disorders e.g. corneal infection, and many other called and wound healing and epithelial cell proliferation, to be used to ald wound healing and epithelial cell proliferation, to be used to ald wound healing and epithelial cell proliferation, to be used to all and process the analyse of all and the specification. The polypeptides can also be used to all and process the all proliferation, to be used to all and process the analyse of all and all and the specification of an analyse of all and all a
                                                                                                                                                                                                                                                    New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antiarthritic; antiasthmatic; immunosuppressant; antiarteriosclerotic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antiallergic; antidiabetic; antilipaemic; antirheumatic; osteopathic; dermatological; antidiabemic; antipsoriatic; hepatotropic; antigout; antiinflammatory; antiHV; protein transport regulator; cancer; immune disorder; cell proliferative disorder; secretory disorder; autricaria; allergy; abnormal vesicle trafficking; asthma; autoimmune haemolytic anaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 FFEMLPSSEFQISVVDCQPVHDEATPSQTTVLVVICGSVKFEGNKQRDFNQNFILTAQAS 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be as a food additive or preservative to increase or decrease storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a novel secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MASVDFKTYVDQACRAAEEFVNVYYTTMDKRRRLLSRLYMGTATLVWNGNAVSGQESLSE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein transport molecule; PTAM; diagnosis; cytostatic;

The present invention provides the protein and coding sequences of human NTF2 associated protein 16. The sequences can be used in the treatment of cancer and HIV infection, as well as other diseases. The present sequence is the protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
molecules (PTAMS) given in AAY82317 to AAY82324. The PTAMS have cytostatic, antiathic, antiathmatic, immunosuppressant, antiatharthicits, antiathmatic, immunosuppressant, antiathericis, antiatharthicis, antiathmatic, immunosuppressant, antitherentic setepathic, dermatological, antianaemic, antipaemic, antistoper, antistoper, antistoper, antistoper, and antially antistoristic, preparation transport. PTAM proteins and antagonists are useful for preventing or treating a disorder associated with decreased or increased dispression or activity of PTAM protynucleotides are useful for dispression or activity of PTAM. Protonicis and set useful for forming a hybridisation complex, preferably after PCR amplifying the forming a hybridisation complex, preferably after PCR amplifying the ploingies and samples biseases prevented, treated or disprosed include cell protiferative disorders such as cancers, immune disorders, secretory disorders and other conditions associated with abnormal vesicle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nemolytic anaemia. Anti-PTAM antibodies may be used as antagonists, as targeting or delivery mechanism for bringing pharmaceutical agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         into cells or tissues expressing PTAM and for diagnosis of PTAM related disorders. PTAM, its catalytic or immunogenic fragments are useful for drug screening using libraries of compounds. PTAM polynuclectides are useful for generating hybridisation probes useful in mapping the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           EMLPSSEFQISVVDCQPVHDEATPSQTTVLVVICGSVKFEGNKQRDFNQNFILTAQASPS 122 : ||||||||::::||||||::||| ||:||:|| DTLPSSEFQVNMLDCQPVHEQATQSQTTVLVVTSGTVKFDGNKQHFPNQNFLLTAQSTPN 123

The present invention describes primer sets for synthesising 5602 (2011-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligounclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide comprises a 3'-end sequence complementary to a complementary strand of a polynucleotide which comprises a 3'-end sequence complementary to a complementary strand of a sequence of sequence of the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in comprise therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the protein send of the full-length cDNAs. The primers also useful for the connext of the full-length cDNAs and AHUS1363 and AHUS1363 to AAHUS1363 to AAHUS1363 to AAHUS1632 and AAHUS1633 to AAHUS1632 and AAHUS1633 to AAHUS1632 and AAHUS1633 to A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification

rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosting a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also to a pathological condition. Antibodies to the proteins can also to a pathological condition. Antibodies to the proteins can also to a pathological condition. Antibodies to the proteins can also the used in alleviating symptoms associated with the disorders and in diagnostic immunosospae (g. rabbit). Disorders which are diagnosed or treated immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autofinamen disorders e.g. rhoumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, nervous system disorders e.g. cremental isohaemia, and/openesis, nervous system disorders e.g. alzheimer's disease, infections caused by bacteria, viruses and fungi and coular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification. The polypeptides can also the contractive disorders listed in the specification.
                                                                                                                                                                                                                                                                                                                       New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DFKTYVDQACRAAEEFVNVYYTTMDKRRRLLSRLYMGTATLVWNGNAVSGQESLSEFFEM 64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ransplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be as a food additive or preservative to increase or decrease storage capabilities, fat content lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a novel secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Drosophila; developmental biology; cell signalling; insecticide; pharmaceutical.

120

invention relates to an isolated nucleic acid detection reagent ble of detecting 1000 or more genes from Drosophila. The invention

Disclosure; SEQ ID NO 21843; 21pp + Sequence Listing; English.

nteractions

iseful in developmental biology and in elucidating cell signalling and

interactions in higher eukaryotes for the development of

insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL36511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB22072).

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         - 100 - 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16-JUL-
                                                                                                                                                                                                                                                                                                                                                              8-MAY-
  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                     ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;
                                                                                                                                                                                                                                                                (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wlpo.int/pub/published_pct_sequences.
                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
